DETAILED ACTION

Election/Restrictions

Applicant's election of invention I, species a1 in Paper No. 9 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-6, 12, and 13 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 1 recites the limitation "the printed wiring board" in lines 6-7. There is insufficient antecedent basis for this limitation in the claim. Examiner assumes Applicant was attempting to refer to the "interconnection device" recited in the preamble of the claim.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in-

(1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effect under this subsection of a national application published under section 122(b) only if the international application designating the United States was published under Article 21(2)(a) of such treaty in the English language; or
(2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that a patent shall not be deemed filed in the United States for the purposes of this subsection based on the filing of an international application filed under the treaty defined in section 351(a).

Claims 1-6 and 12 are rejected under 35 U.S.C. 102(b) as being anticipated by US 5,136,471, granted to Inasaka (hereafter Inasaka).

Inasaka discloses, referring to figure 1, an interconnection device comprising: first (24) and second (14) outer layers, each including substrate material, and at least one inner layer disposed between said first and second outer layers, said inner layer including at least one conductive trace (18) disposed on substrate material proximate to an edge of the interconnection device and being accessible for direct electrical connection [claim 1], wherein said conductive inner layer trace extends outward from the edge of the interconnection device [claim 2], wherein at least a portion of said first outer layer is removed to provide access to said conductive inner layer trace [claim 3], wherein at least one conductive protrusion (16) is formed on said conductive inner trace [claims 4-6], wherein said inner layer material is ceramic [claim 12].

Claims 1-3 and 13 are rejected under 35 U.S.C. 102(e) as being anticipated by US 6,061,246, granted to Oh et al. (hereafter Oh).

Oh discloses, referring to figure 6, an interconnection device comprising: first and second outer layers (121), each including substrate material, and at least one inner layer (122) disposed between said first and second outer layers, said inner layer including at least one conductive trace (141) disposed on substrate material proximate

Art Unit: 2827

to an edge of the interconnection device and being accessible for direct electrical connection [claim 1], wherein said conductive inner layer trace extends outward from the edge of the interconnection device [claim 2], wherein at least a portion of said first outer layer is removed to provide access to said conductive inner layer trace [claim 3], wherein said inner layer material is organic (see col. 4, lines 40-45) [claim 13].

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
